Models D, E, F and Liberty

Maxwell Motor Sales Corporation, Newcastle, Ind.

Price List of Parts for  
**Brush Runabouts**

Models D, E, F and Liberty

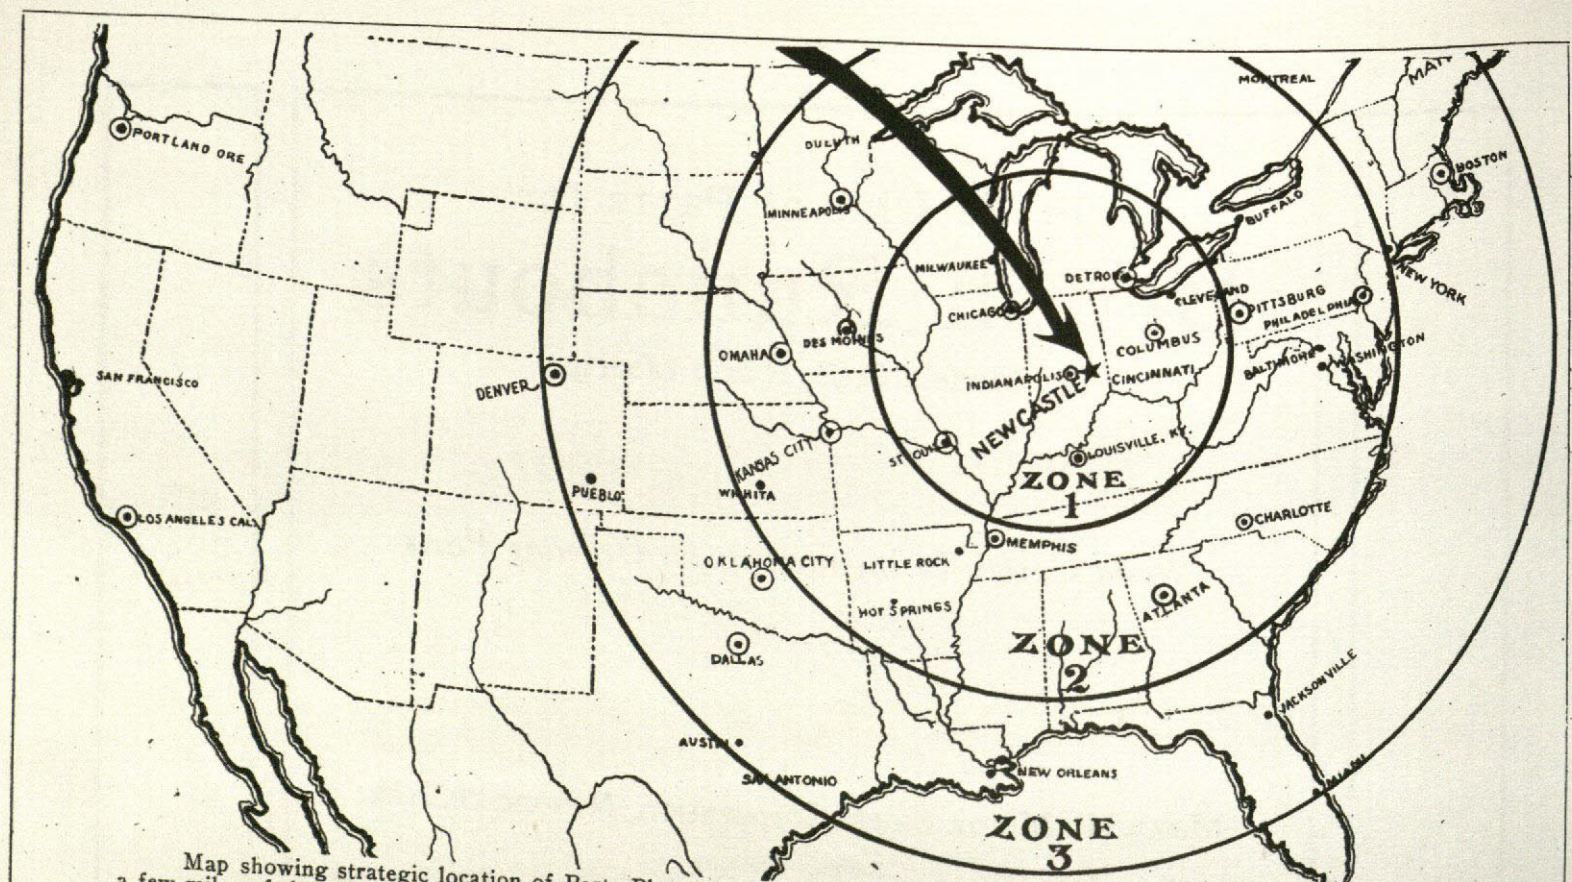

*Read Carefully Instructions for Ordering Parts*

**Maxwell Motor Sales Corporation, Newcastle, Ind.**

Service Stations

13th and East Ave., Long Island City, N.Y.

675 Golden Gate Ave., San Francisco, Cal.

Map showing strategic location of Parts Plant of Maxwell Motor Company at Newcastle, Indiana, which is within a few miles of the center of population of the United States and less than twelve hours' shipping distance from over 50% of old customers. This plant is acknowledged to be the best plant in the world devoted to the making of replacement parts for past models.

**An Investment of \$1,750,000 in Plant and Stock of Parts for Service to Old Customers**

## Read the Maxwell Plan of Service to Owners of Brush Runabouts

While not legally obligated, the Maxwell Motor Company does feel morally obligated to every owner of a car made by any of the concerns whose plants and equipment it has acquired. In brief, the companies that formerly made the Maxwell-Briscoe, Stoddard-Dayton, Columbia, Everitt, Sampson, Brush and Courier Cars.

We believe our plan for taking care of former customers is the most comprehensive, the most expeditious, and has proven altogether the most satisfactory to owners that has yet been devised by any concern.

All special tools and jigs for the making of interchangeable replacement parts were carefully conserved and installed in the plant formerly known as Maxwell-Briscoe plant at Newcastle, Indiana.

This plant occupies a unique location—it happens to be in the city which, according to the last U. S. census, is almost the exact center of population. The plant and equipment represent an investment of one and three-quarters millions dollars—and is devoted exclusively to the making of repair and replacement parts for former models.

Study the map. Its center is Newcastle, Indiana. Not the center of the United States, but of greater importance—the center of population and the center of ownership of Maxwell, Brush, Courier, Everitt, Columbia and Stoddard-Dayton cars and Alden-Sampson trucks.

Follow the three circles. All cities and towns on the line, and inside the greater circle, are approximately 24 to 36 hours express shipping distance from our Newcastle Parts Factory.

Those points on the line and inside the intermediate circle are only 12 to 18 hours distance, and those points on the line and inside the inner circle are 6 to 12 hours or less distant from the central supply point—Newcastle, Indiana.

That you may the better appreciate what this means in prompt service in emergency cases, please note that of the more than 122,000 owners of these cars, 37,606 live within the outer (24-hour) circle; 84,494 (or over 70% of owners) live within the 12-hour circle, and 60,079 (or over 50% of all owners) are within 6 hours of our central supply point.

Now, consider for a moment, that in order to give quick service to the extreme Eastern and Western Sections, we have Service Stations in Greater New York (Long Island City) and San Francisco. Cal. All owners living in Eastern States are supplied from the Maxwell Motor Sales Corporation (13th and East Ave.), Long Island City,

N. Y.; those living between the Alleghanies and the Rockies, from the Maxwell Motor Sales Corporation, Newcastle, Ind.; and all owners west of the Rockies—all Pacific Coast—are supplied from the Maxwell Motor Sales Corporation (675 Golden Gate Ave.), San Francisco, California.

These Service Stations carry such parts as are in most general demand and from which you or your dealer or repair man can almost instantly obtain any desired part. You will see that old customers are taken care of in a manner never before attempted in this business.

When it is considered that one building 60 ft. wide and 722 ft. long and three stories high is devoted exclusively to the storage of these replacement parts, some idea may be had of the task involved.

In this building are 45,000 separate bins, each containing a separate automobile part. In addition to these are hundreds of racks—literally miles of racks—for the storing of radiators, mud guards, frames, axles, etc., etc., etc.

It is interesting to know that the majority of the parts come within the 21-lb. weight limit, and are therefore sent by Parcels Post. This is a great saving, especially for those owners who live in rural districts, and who, were the parts sent by express, would have to make an extra trip to town and wait an extra day for the part. In addition to the large number of parts sent by Parcels Post, something over 25 tons per week go by express, and such large parts as axles, etc., as go by freight, make up another 20 tons per week.

Contrary to the usual practice, the Maxwell Motor Company has decided to *recognize any dealer*, no matter what line he handles, and to give him the regular dealer's discount on these parts.

The reasons for doing this are two: First, a great many dealers who formerly handled Maxwell-Briscoe, Stoddard-Dayton, Everitt, or the other lines, do not now handle Maxwell cars—and vice versa. Obviously it would be unfair to an owner, and also we think unfair to those former dealers, to insist that an owner get parts only through our present dealers.

Second, in establishing the Service Factory and Stations, we have done so entirely for the owner's convenience, and we wish to still further help him by making it possible for him to get any part he wants for his car from his nearest dealer, regardless of whether that dealer handles the present Maxwell line or not. We believe that dealers generally will appreciate this, and we are sure the owners will.

# Instructions for Ordering Parts

Price, Terms and Conditions Subject to Change

Without Notice

## How to Order.

The Maxwell Motor Sales Corporation cannot hold itself responsible for errors and delays through failure to comply with the following instructions, nor will it be responsible for errors which may occur as the result of incorrectly written or incorrectly transmitted telegraph or telephone orders.

### When ordering parts give:

- The name of the Model (such as Brush Model D-E-F or Liberty and state if runabout or roadster);
- the car number (which can be found on the name plate on the dash);
- the motor number (which will be found on top of cylinder casting on left);
- the part number;
- the name of part (if painted, state color, and when ordering, state if part is right or left, front or rear);
- also state how many of each part are wanted;
- if parts are for car with sixty-inch thread, state same in your order.

Write your orders for parts on a separate sheet of paper from your letter, preferably on the blanks furnished by the Company; leave nothing to be inferred. State definitely what is wanted, and address all correspondence to the Company and not to individuals.

With every order give shipping directions, each time giving the name of county, as well as town and state.

If in doubt as to the number or name of part, send us the old part or parts; carrying charges prepaid and be careful to tag each part with your firm name, your address, and the car number, then send letter stating fully when and how you are sending the old material, and give explicit shipping instructions for the return of the new goods.

## REMITTANCES.

Terms: Strictly cash with order, except to regularly appointed dealers having a deposit with the company. We open no accounts with others.

Send remittances with your order, otherwise goods will be held for remittance or sent C. O. D., at our option. When parts are ordered shipped by mail, remittance must be sufficient to cover postage also. If remittance is more than sufficient, excess will be refunded. Remittances should be made in New York or Chicago exchange, postoffice or express money order. Make all money orders or drafts payable to the Maxwell Motor Sales Corporation.

## IMPORTANT.

Be sure to prepay carrying charges in all cases. Our Receiving Department refuses to accept shipments on which charges have not been prepaid.

## REPAIRS.

Repairs made on cars or parts of cars in our repair shop must be paid for in cash, certified check, or New York or Chicago draft upon delivery of such repair cars or parts to their owners or their representatives. Personal checks cannot be accepted. Under no circumstances will accounts be opened for repair work.

## These Suggestions Will Save You Money

When returning parts to the factory, bill of lading should be made out showing the contents of boxes or crates under their proper classification.

For Example

If returning fenders bill them as "Crate of Auto Fenders."

Springs as "Elliptic Auto Springs."

Gear parts as "Metal Auto Gear Parts."

Motors as "Gasoline Engines."

**State also the number of boxes, bundles or crates used in making shipment.**

It's to your own interest, as you have to pay transportation charges, to have your bills of lading correctly made out—then you are sure of getting the lowest freight or express rates.

## LUBRICATION OF THE MOTOR.

There should be at all times not less than one-half of an inch of motor oil at the bottom of the crank case. Inspection should be made from time to time to ascertain whether or not the lubricator is operating satisfactorily and delivering the required amount of oil. Do not use anything but the best grade of motor or gas engine oil of high fire test. Use oil freely, but not excessively or wastefully. From ten to fourteen drops a minute from the dash oiler should be sufficient for the engine lubrication. See that all connections at the lubricator are tight, and free from any leakage.
