

EVERY DAY MANNERS

Many people have good deportment on Sundays and holidays, but it's every day manners that count. It's the same with automobiles. Many motor cars behave well some days but behave very badly when subjected to the rigorous tests of steep hills, deep mud, high altitudes and zero weather.

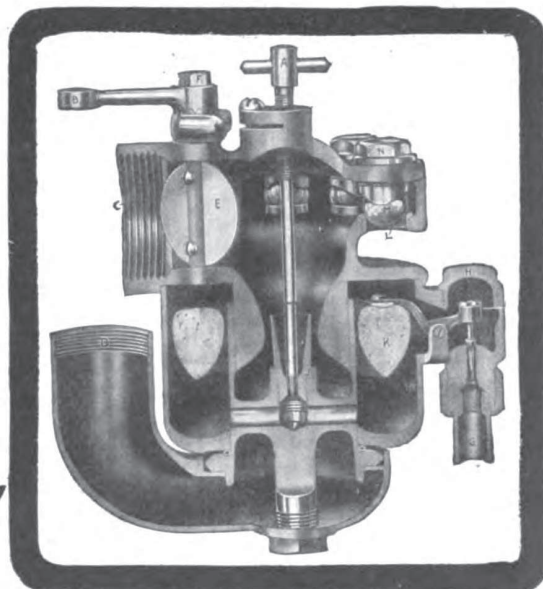

But the cars equipped with FLOATING BALL TYPE KINGSTON CARBURETORS are remarkable for their every-day deportment. Every KINGSTON equipped car is as thoroughly supplied and is consistently supplied with the correct explosive mixture under adverse conditions as under the very best and most favorable ones.

That's because the KINGSTON CARBURETOR is so marvelously automatically controlled by five-floating-ball-valves, which rise under different pressures and which supply an automatically controlled auxiliary air unknown to other carburetors. In fact, the performance of KINGSTON equipped cars is unknown to the cars equipped with other carburetors. The economy of KINGSTON equipped cars is a matter of general knowledge.

Let us tell you more about this most automatic carburetor made by the oldest manufacturer of carburetors in America.
