

KINGSTON

FLOATING BALL TYPE

CARBURETOR

**Many a Motor
Has Tremendous
Possibilities—Undiscovered**

Smooth, even power, highly desired flexibility for city streets, almost unbelievable economy are the results of a Kingston Carburetor.

Many a motor has splendid possibilities, but its even and reliable action is throttled, curtailed or destroyed by a spasmodic carburetor.

KINGSTON CARBURETORS ARE FLOATING BALL TYPE

That means that five, perfectly automatic, absolutely unerring floating ball valves supply the auxiliary air in such unvarying and reliable proportions, that correct mixture must be assuredly supplied for any possible motor speed. The story of the action of the Kingston Carburetor would be a pretty complete thesis on the subject of carburetion.

Let us tell you about it.

Made by the Oldest Manufacturers of Carburetors in America.

Established 1895.

BYRNE, KINGSTON & CO., KOKOMO, IND.
